STATEC HACKATHON 2026

The Luxembourg Trade Resilience Radar

Who does Luxembourg depend on?

ONE TOOL

Resilience Radar
For HCPN and ministries: where are we exposed?

Deep-Dive
For STATEC analysts: how much, from whom, down to the 8-digit product.

Can be tested on real crises
COVID 2020 and the 2022 energy shock, seasonally adjusted.

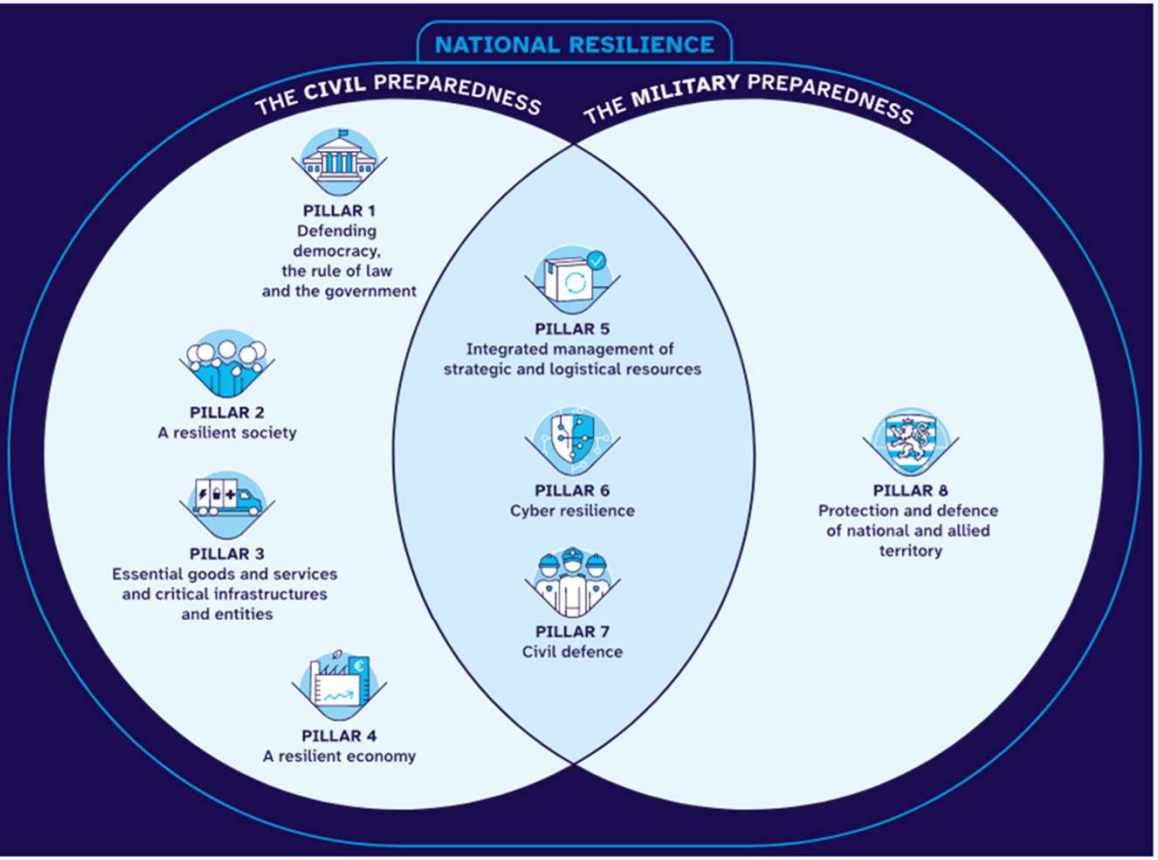

Data: Eurostat Comext ds-045409 (2000–2026) · Open source, EUPL-1.2

The National Resilience Strategy is based on two blocks – civil preparedness and military preparedness – and eight pillars proposing concrete actions to be implemented by institutions, public authorities and/or civil society.

Each pillar represents a key area in which the country is strengthening its capacity to anticipate, withstand and recover from crises.

Discover how Luxembourg is taking concrete action to protect its institutions, population, infrastructure and economy.

OUR PROPOSAL · NATIONAL RESILIENCE STRATEGY

Make it Luxembourg's regular resilience check.

It works today: open Eurostat data since 2000, open source, updated every month.

Our tool sits on pillars 3, 4 and 5: essential goods, a resilient economy, strategic resources.

PILLAR 4 · KEY ACTION 3

"A de-risking strategy and supply chain transparency will help to reduce critical dependencies."

We need a data visualisation and monitoring tool!

The Radar is that monitoring instrument.

Three things to make it official

1. **STATEC runs it every month**
   Refreshed with every Eurostat release.
2. **We see where goods are really coming from**
   Look through the Belgian and Dutch hubs.
3. **We agree the alert thresholds with HCPN**
   When does a basket turn from watch to alert?
